A Handbook of The Flowering Plants of Nepal Volume-4 / Keshab Raj Rajbhandari,
Sanjeev Kumar Rai

Government of Nepal Ministry of Forests and Environment Department of Plant
Resources, Nepal 2022

522p.; ill. 25 cm.

Includes Index.

9789937947640

\$ 75.00 / HB

1700 gm.

Volume 4 covers 27 families from Icacinaceae to Orobanchaceae. As in the
previous volumes, an updated checklist of the flowering plants of Nepal is
presented based on herbarium specimens collected from Nepal and available
literature and online resources. The authors have compiled information from
specimens preserved in various institutions in Nepal, India, Japan, Europe, China,
the United States of America and many other countries.

A Visual Guide to Philippine Fauna / Jastine Isabelle C. Rosit

Vibal Group, Inc., Philippines 2022

vi, 129p. ; 28cm.

9789710756698

\$ 25.00 / null

400 gm.

Referencia Moderna: A Visual Guide to Philippine Fauna is an adventuresome field guide on the country's animal life. It aims to give both the young and the young at heart a complete picture of the country's endemic wildlife, their distribution, and their conservation status.

The book is replete with vivid images of actual animals in the wild, and comes with basic information and interesting trivia about Philippine fauna, including the scientific and local name, habitat, diet, and way of life of each species.

The book is divided into the following chapters:

- The Beginning of Aguila's Quest: Animalopedia
- The Journey to Mammal Land: Mammals in the Philippines
- In Search of a Bird Sanctuary: Birds in the Philippines
- Herpetofauna in Peril: Reptiles and Amphibians in the Philippines
- The Plight of Marine Life: Fish in the Philippines
- A Closer Look at the World of Butterflies: Butterflies in the Philippines
- The Breathtaking Stopover: Key Biodiversity Areas in the Philippines
- Facing the Dangers that Abound: Endangered Species in the Philippines
- Gearing up for the Real-life Quest: Wildlife Conservation and Protection

World heritage sites of Australia / Peter Valentine ; foreword by Bob Brown

National Library of Australia, Australia 2023

v, 313 pages : colour illustrations, maps, portraits ; 29 cm

9781922507587

\$ 64.99 / HB

1860 gm.

Visitors to Australia marvel when they see the places recognised by the United Nations as World Heritage. From the ancient, pristine temperate rainforests in the south to the massive escarpments and tropical wetlands in the north, they are dazzling in their ecological complexity and the record they offer of life on this planet and the human experience in Australia.

Peter Valentine presents Australia's World Heritage sites in a magnificent tribute to natural and cultural history. The outstanding qualities of each site are described and illustrated in exquisite detail, along with an account of how the site came to be on the World Heritage List. Rainforests that show the connections of the ancient supercontinent Gondwana. Rock art that points to a history of human settlement reaching over 60,000 years into the past. Sandstone remnants of eighty years of convict labour and imprisonment. A marvel of twentieth-century architecture. This is Australia's world heritage.

A testament to his decades of involvement in World Heritage, Valentine includes in each chapter a reflection on his observations, involvement with or connection to each site, from a conversation with the late Kakadu Elder Bill Neidjie to diving on the Great Barrier Reef and developing safe protocols for swimming with the whale sharks at the Ningaloo Coast

Keo Seima Wildlife Sanctuary (KWS) is of national, regional, and global importance for a large number of species from a range of taxa. Here, we report on one component of the KWS biological monitoring program—an updated KWS species list.

This list is the result of collaborative efforts among the Royal Government of Cambodia (RGC), non-governmental organizations (NGOs), visiting researchers from institutions across the world, national and international students, and citizen science initiatives. This list shows that, to date, 959 species have been recorded to occur within the boundaries of KWS, the highest number published for any protected area in Cambodia.

Erebus the Ice Dragon: Portrait of an Antarctic Volcano / Colin Monteath

Massey University Press, New Zealand 2023

352p. ; 25.5cm.

9781991016362

\$ 70.00 / HB

1600 gm.

Haunting and searingly beautiful, Erebus has attracted explorers, mountaineers, artists and scientists; each drawn to the mountain by their own particular vision or curiosity. The mountain is a truly unique geological phenomenon - an active volcano sheathed in ice, with hundreds of ice caves, steaming towers 6 metres high around its summit and a lava lake. Also, in the minds of many New Zealanders, it is a place of destruction and despair, wrought by a single momentous accident. Antarctica veteran Monteath weaves history, science, art and adventure into a compelling tale, supported by superb images selected from his lifetime of working and voyaging in the area.

Get To Know Them: Introduction to Singapore's Common Bird Folk! / Gabriella, Ellena

Singapore Asia Publishers Pte Ltd, Singapore 2023

76p.

9789813421738

\$ 29.00 / HB

300 gm.

The express objective for creating this book has always been to provide a concise introduction to various bird species regularly occurring in Singapore. The content has been carefully designed and researched to provide the reader with key insight regarding these birds. In addition, this book is written and illustrated by an overenthusiastic birdwatcher. In this book, she share her personal experiences encountering these 20 bird species in her ventures throughout Singapore's parks and gardens. I hope Get To Know Them: Introduction to Singapore's Common Bird Folk will appeal to both the beginner and experienced adventurer, as I aim to utilize my story to breathe new life and offer a new and more positive perspective regarding what is often overlooked by the public; the common neighborhood birds. A portion of this book's profits will be donated to National Parks Board to fund wildlife conservation and research facilities.

Great Stories of New Zealand Conservation / Alan Froggatt

Upstart Press, New Zealand 2023

208p.

9781776940066

\$ 40.00 / null

450 gm.

New Zealand has an extraordinary range of plants and animals, yet a great many species are trending towards extinction. The arrival of humans to the country, and the predators we brought with us, pushed the natural world to the brink. But while we are the villains of the story, we can also be heroes. Great Stories of New Zealand Conservation tells 50 inspiring and thought provoking stories, covering all matter of conservation and ecological projects from right across the motu. Some of the projects have been driven by national organisations - such as saving the kakapo and the yellow eyed penguin. Other chapters in the book focus on locally led initiatives, such as the creation of off-shore island sanctuaries. Because of conflicting demands on our land, conservation stories can be controversial. The author has not shied away from probing topics including the control of Himalayan tahr and the perils of commercial forestry. Learn how New Zealand has innovatively led the way on conservation initiatives - such as the translocation of birds and the development of predator-proof fences.

9781775541721

\$ 40.00 / null

400 gm.

The must-read book on what New Zealand's changing climate means for our everyday lives A warmer world will change more than just our weather patterns. It will change the look of the land around us, what grows and lives on it - including us. In this must-read book, Professor James Renwick untangles how we know what the future holds and why it matters to our everyday lives. He looks at New Zealand's increasingly frequent natural disasters, warming and acidifying waters, the creep of rising sea levels, and the ways that the changing weather will affect our agriculture, lifestyle, food security and economy. Under the Weather is a picture of a planet in danger, a reality-check on what that means for this country, and a reminder that the shape of our future is up to us.

A Guide to Macrofungi in Singapore / Serena ML Lee & Amy MF Choong

National Park Board, Singapore Botanic Gardens, Singapore 2023

232p.

9789811871870

\$ 30.00 / null

592 gm.

A Guide to Macrofungi in Singapore is the outcome of seven years of field work and identification in Singapore by Serena Lee of the Singapore Botanic Gardens and six years of teaching Fungal Biology by Amy Choong of the National University of Singapore. It is written for anyone who wishes to learn about fungi, and how to identify and classify the fungi they encounter.

This book aims to introduce people to the fascinating worlds of macrofungi and slime moulds (which may be mistaken as true fungi in their spore-bearing stage). As the first guidebook to Singapore's amazing diversity of macrofungi and slime moulds, it sheds light on the current state of fungal taxonomy here, and seeks to highlight the importance of these organisms' role in our ecosystem.

The award-winning Zoo Taiping & Night Safari is Perak's top tourist attraction and Malaysia's first night safari. Founded in 1961, the 34-acre zoo is located within the famous Taiping Lake Gardens and is run by the Taiping Municipal Council. The zoo features 1,500 animals from 130 species in exhibits resembling their natural habitats. As a wildlife conservation centre, Zoo Taiping & Night Safari has successfully bred 14 endangered wildlife species, including the Malayan tiger, the Malaysian elephant and the milky stork.

Zoo Taiping & Night Safari yang memenangi beberapa anugerah adalah tarikan pelancongan terulung di negeri Perak dan Night Safari yang pertama di Malaysia. Ditubuhkan pada 1961, zoo seluas 34 ekar ini terletak di Taman Tasik Taiping yang mashyur dan diuruskan oleh Majlis Perbandaran Taiping. Zoo ini menampilkan 1,500 haiwan daripada 130 spesies dalam pameran yang menyamai habitat aslinya. Sebagai pusat pemuliharaan hidupan liar, Zoo Taiping & Night Safari telah berjaya membiak 14 spesies hidupan liar yang terancam, termasuk harimau belang Malaya, gajah Malaysia dan burung botak upeh.

Wang Kelian, Perlis: The Forgotten Valley = Lembah Yang Kian Hilang / Peter Ong Monyet Ventures, Malaysia 2023

152p.

9786299822103

\$ 60.00 / null

850 gm.

Wang Kelian – The Forgotten Valley (or Wang Kelian – Lembah Yang Kian Hilang) highlights the unique characteristics of the northernmost village in the northernmost state of Peninsular Malaysia - from the 370 million-year-old limestone Nakawan range to the Stone Age tools found on site as well as the amazing biodiversity that still exists - there is much that still remains undiscovered and undocumented in this part of the world. The book showcases one of the most unique terrains and forests in Semenanjung Malaysia where the Indochine and the Sundaland meet — over 200 species of birds and 40 species of mammals, 7 unique species of primates including the Stump-Tailed Macaque whose Malaysian population can only be found in this tiny 5000 ha area. Many species here are indeed endemic and not found anywhere else in the country. The author and photographer of the book, Peter Ong, spent two months in this northern corner to photograph and document the incredible biodiversity, terrain and cultural heritage of the Wang Kelian area. This documentation project by Roots and Shoots Malaysia and Perlis Nature and Wildlife with the support of Think City, The Habitat Foundation, and Jabatan Perhutanan Perlis resulted in a body of work which includes this 150-page full colour dual-language photo book (English and BM), a 30-minute documentary to be publicly broadcast later in the year, as well as an exhibition at Kuala Perlis and a two-month traveling exhibition around Perlis. The author and the supporting parties hope this book will be the beginning of a long-term collaboration with local partners and government agencies alike, no less because they're truly fallen in love with Perlis and its warm hearted people. They believe that by working hand-in-hand with various state holders and partners, future generations may continue to enjoy the clear blue skies, the lush greenery, and the clear crisp air of Perlis.

Miombo Woodland, Part 1 (Ferns and Monocots): Based on Plants from The Mutinondo Wilderness Area, Northern Zambia: Field Guide to the (Wetter) Zambian / Kaj Vollesen & Lari Merrett

Lari Merrett (Self-Published), Zambia 2020

1020p.

9781949677119 (Part 1); 9781949677201 (Set)

\$ 295.00 / null

1200 gm.

This compilation of photographs, collections and expertise gathered over the past 25 years describes the miombo woodland, the threats it is facing and contains descriptions of 143 families, 611 genera and 1634 species found within the Mutinondo Wilderness Area of northern Zambia. It is a prime cornerstone to the appreciation of the impressive diversity of the wetter miombo woodland which is essential to publicise, particularly in the light of the ever increasing pressures and destruction being wrought on this woodland in Zambia and the sub region. By being written by a layperson (Lari Merrett), together with a leader in African dry lands plant taxonomy (Dr. Kaj Vollesen), it is a very useful information and identification resource for conservationists, botanists and nature lovers who want to learn more about the magnificent miombo. The book contains 1022 pages and is divided into two (2) parts. In addition to the descriptions of the ferns and monocots, part 1 includes: a detailed Introduction by Dr. Paul Smith of the Botanic Garden Conservation Institute; an inspirationally charged Foreword by Noah Zimba of the Zambian Institute of Forestry; a comprehensive introduction to Mutinondo Wilderness and its botanical background, and a 51-page photographic key. Part 2 contains the descriptions of dicots. For ease of reference the complete scientific and common name indices for both parts are colour coded and included in the back of each. Species descriptions include habit, height, flower colour, key characteristics (underlined), distribution, habitat, altitude and flowering time. Of the 1634 species descriptions, 1618 are accompanied by 3 to 8 photographs each (of the balance, 9 descriptions have 2 photos each, 2 are with only one and 2 are lacking). The family and genera descriptions include only the key characteristics for each. Photos within the photographic key in part 1 are mostly arranged in colour order of distinctive flowers, fruit, leaves and thorns. These are all divided into the following habits: ferns; sedges and grasses; creepers, climbers and lianas; herbs and subshrubs; trees and shrubs.

The Arabian leopard is an IUCN-listed critically endangered animal. This shy and enigmatic animal is close to extinction; experts estimate that there are as few as 100 left in the wild. The Arabian Leopards of Oman by Dr Andrew Spalton and Hadi Al Hikmani brings together previously unpublished scientific data and camera-trap photography which captures the secret life of the wild animals of the remote and inaccessible Dhofar Mountains Chain and tells the story of Oman's vital conservation work that hopes to bring this unique and elusive creature back from the brink.

\$ 180.00 / HB

900 gm.

This is an ordinary album about extraordinary animals. This book is the result of my many years' work among wild animals: observing them and hunting for them by means of my photo camera; hunting for moments worth immortalizing in the frame of the lens.

The life of animals is my passion. As a veterinary doctor, I make sure to not only take care of their health but also to understand their behaviours and welfare. The photos presented in this book show wild animals, both the lazy and relaxed species and the excited and fierce ones. I tried to document and demonstrate their beauty, regardless of their size or the emotions they evoke. The wild mammals living in the beautiful Oman are really extraordinary, so feel welcome to take a look at this ordinary album, where you can see all of them together, on equal photographic terms. I hope you will enjoy it!

Dhofar, the southern province of the Sultanate of Oman, has a remarkably diverse landscape, unlike any other in Arabia. Sometimes known as the 'Land of Frankincense' for the ancient resin trade that fed the Roman Empire, Dhofar is famous also for the khareef – the summer monsoon that supports lush tropical woodlands and tall grasslands. This book, the first comprehensive account of the region, brings together spectacular and rare images with an exhaustively researched text that describes the landscape, climate, flora, fauna and people.

This book is aimed at the new birdwatcher and anyone with an interest in the natural world around us. If you are on a birdwatching trip looking for new and exciting species or just want to know the name of a bird you saw at the beach, there is something for you in this book.

Over 300 species of birds are included representing all regularly occurring birds in Oman. Distribution maps, bar diagrams and more than 700 photographs help in the identification.

The introduction provides helpful information on identifying birds, what to look for and what equipment is needed.

Timonius in Borneo with 68 New Species: A little-studied, hyper-diverse rainforest plant genus in the Guettardeae (Rubiaceae) and implications for the taxonomy of an alliance widespread throughout Southeast Asia / Junhao Chen & Khoon Meng Wong (Illustrations) Puay Koon Cheng & Evonne Tay Koh

\$ 200.00 / HB

1600 gm.

This monograph details what is known about *Timonius* in Borneo, a group in the extremely hyper-diverse coffee family Rubiaceae, that no one has studied since some scattered initial documentation in the past few centuries. Now, all Bornean territories are much more explored, botanically collected from, and 'developed'. Still, very few studies have been made in Southeast Asia for complex and highly diverse plant groups which can illuminate our understanding of plant diversity and classification, and contribute to a more accurate assessment of plant lineage development and evolution. This is a first step, of many such first steps that will be needed, in addressing the incredible plant richness of the Malay Archipelago, a recognised region of spectacular biological richness.

This account documents 94 species of *Timonius*, a genus of mostly treelets to small trees still poorly understood throughout Southeast Asia, of which 68 species are newly recognised. Some 96% of the genus is endemic to Borneo, not known beyond this large, physiographically and geologically diverse tropical island, a centrepiece in the biogeography of a vast, biologically diverse region of our globe. The book includes discussions on the morphology, biology and reproductive ecology of *Timonius* and related plants, and is illustrated by 294 figures and 58 botanical line-drawings.

The Endemic Plant Genera of Borneo / Louise Neo

National History Publications (Borneo) Sdn. Bhd., Malaysia 2023

xiv, 194gm.

Includes Index

9789838122078

\$ 115.00 / HB

900 gm.

This account presents 62 vascular plant genera, comprising 162 species, currently known only from Borneo, with photographs and maps of their known and potential distributions. Borneo's exceptionally high plant diversity is threatened by rapid land-use change, hence, assessing threats to species uniquely found there, and identifying areas where a significant proportion are harboured, are urgent tasks. Centres of endemism especially found in northwest Borneo are considered against remaining forest cover and protected areas to highlight plant conservation exigencies. The book is updated from the author's research which was awarded the International Society for Plant Molecular Biology 2021–2022 Gold Medal for most outstanding doctoral thesis in plant science research at the National University of Singapore.

\$ 70.00 / null

600 gm.

Stingless bees or locally known as Kelulut is a special of bees that already been part of people livelihood around the world since ancient time. Even though they are not as honey bees, their contribution as pollinators to thousands of plant species are not trivial. In comparison to other group of bees, stingless bees are more diverse and versatile. Stingless Bee Miracle Insect for Human Benefits present a comprehensive coverage on the impact of stingless bees in human lives. The book covers the diversity of stingless bee's species including Meliponuculture activities in increase the income of the people especially in rural area. The benefits of their products such as honey, bee bread and propolis are also been pondered. The technologies behind the stingless bee beekeeping and processing of stingless bee product are also been discussed. The objective of this book is to provide knowledge and information on the benefits of stingless bee to economy, health and environment. We believe that this book will enable the public and research community to understand the significant role of stingless bee in our lives. We hope that it will impart the excitement and awe associated with human knowledge about, and that use of these miracle insects from nature for human benefits.

Plants in Herbal Rice / Aweng Eh Rak, Karunakaran Tharmadurai & A. Latiff

UMK Press, Malaysia 2023

174p.

9789670021621

\$ 80.00 / HB

700 gm.

Basically, this book describes about the types of herbs used in the preparation of herbal rice among the Siamese community of Kelantan. It also contains herbal names in three languages namely Siamese, Malay and English, in addition to scientific names. There are two components in its content, namely the picture component and the description component. The purpose of the pictures is to give a clearer picture to the readers regarding the shape and colour of the leaves and flowers and fruits of each type of herb used. Meanwhile, in the descriptive component, there are names and one scientific name as well as the brief morphological characteristics and traditional use of these herbs. It is hoped that by reading this book, readers can not only get to know the local herbs commonly used by the Kelantan Siamese community in the preparation of herbal rice but also get information related to other beneficial uses to cure diseases or maintain their health.

Ending Plastic Waste / Hardesty, Britta Denise (Editor)

CSIRO Publishing, Australia 2023

190 pages, 23cm

9781486312290

\$ 64.99 / null

495 gm.

Many informal organisations around the world are making a positive impact on the environment and their communities by turning waste into a resource, increasing the social capacity of their community and reducing the amount of pollution in their environment.

Ending Plastic Waste: Community Actions Around the World presents a collection of stories, advice and information from experts in the fields of waste management, plastic pollution and environmental finance to give a broad outlook on how 19 programs from 15 different countries are protecting our planet. By sharing these journeys, the authors hope to encourage others to take a community approach to ending plastic waste.

Perfect for decision-makers working in environmental and marine fields, industry stakeholders and citizen scientist groups, this book provides guidance on how to successfully implement a new program, what resources are needed and the lessons learned by the people behind these programs in overcoming barriers.

Pengkulturan Telur dan Penjagaan Juvenil Belangkas Pantai (*Tachypleus Gigas*) = Coastal Horseshoe Crab (*Tachypleus Gigas*) Eggs Culture and Juvenile Rearing / Faridah Mohamad (et al.)

Penerbit UMT, Malaysia 2023

xviii, 42p.

Includes Index

9789672793809

\$ 12.00 / null

200 gm.

Buku ini merupakan hadiah istimewa dari Kumpulan Penyelidikan Belangkas UMT kepada semua pencinta belangkas di luar sana. Buku pengkulturan telur dan penjagaan juvenil ini dibuat khas sebagai usaha pemuliharaan belangkas pantai spesies, *Tachypleus gigas* yang semakin berkurang di Semenanjung Malaysia. Dengan adanya buku ini, semua lapisan masyarakat dapat berganding bahu membantu usaha pemuliharaan belangkas di kawasan masing-masing. Terdapat empat langkah mudah dalam proses pengkulturan telur dan penjagaan juvenil secara kurungan, yang diperincikan dengan bahasa yang mudah disertakan dengan bantuan gambar dan rajah agar mudah difahami dan diikuti. Buku ini juga menyediakan latar belakang dan maklumat mengenai belangkas seperti biologi, anatomi, dan kitar hidup belangkas yang disampaikan secara ringkas dan padat.

This book is a special gift from the Horseshoe Crab Research Group (HCRG), UMT to all horseshoe crab lovers out there. This egg culture and juvenile care book was specially published as a conservation effort for the decreasing coastal horseshoe crab species, *Tachypleus gigas*, in Peninsular Malaysia. With this book, all levels of society can work together to support the horseshoe crab conservation efforts in their respective areas. There are four simple steps in the process of egg culture and juvenile care in captivity as laid out in a simple language with illustration and images for easier understanding. This book also provides information about horseshoe crabs such as biology, anatomy, and the life cycle of horseshoe crabs, which is presented in a brief and concise manner.

Plants of Nepal (Gymnosperms and Angiosperms) / Krishna Kumar Shrestha, Prabin Bhandari & Shandesh Bhattarai

Heritage Publishers and Distributors Pvt. Ltd., Nepal 2022

1110p.

Includes Index

9789937774529

\$ 100.00 / HB

2000 gm.

This book is about the history of botanical explorations, plant collection, documentation and nomenclature of plant resources of Nepal from the early 19th century to the present. It encompasses comprehensive information on plant diversity, plant resources, entobotany and flora of Nepal, especially the Gymnosperms (Cycadaceae- Taxaceae) and Angiosperms (Nymphaeaceae-Apiaceae) described from Nepal, representing all seven provinces and 77 districts of Nepal, and from a wide elevational range: as low as 60 m (Jhapa) to 6400m (base of the Mount Everest, Solukhumbu), East Nepal. The arrangement of families in the book is based on the APG system of classification, while the genera and species are arranged in alphabetical order.

Emphasis is given to three categories of plants: extended checklist of native and naturalized species; synoptic checklist of uncertain species (Lacking sufficient information on its occurrence in Nepal); and synoptic checklist of exotic species (planted or cultivated species) documented from Nepal. An attempt has been made to provide the latest nomenclature of the species, with synonyms, local names and English names, life form or habit; distribution in Nepal, elevational ranges, and global distribution. In addition, information on endemic plants, threatened plants, naturalized and invasive species of Nepal: use-value of the majority of species reported from Nepal, are also provided. This book should be useful to a wide range of readers, from students, teachers and researchers in the fields of botany, forestry, agriculture, and floriculture, to policy-makers and all who are interested in the plants of Nepal.

A Guide to Wild Fruits of Borneo. / Anthony Lamb (Eds); Louise Neo & Kay Lyons
National History Publications (Borneo) Sdn. Bhd., Malaysia 2023

x, 290p.

9789838122061

\$ 50.00 / null

700 gm.

The edible wild fruits, nuts and seeds of Borneo that are found in the different forests from coastal seashores and islands, through the lowlands and hills, to the montane forests, and on different soils, are estimated to be in the region of 500 different species. These were consumed by the many groups of people inhabiting the island, over many decades. They were the ones who had initially discovered whether different fruits, nuts and seeds were edible, and that some otherwise toxic species become edible only after cooking or fermentation processes. Botanists and taxonomists have subsequently provided the scientific names for these plants and classified most of them into their respective families and genera. However, there are still new species being discovered in what are some of the most species-rich forests in the world, and for many genera, Borneo is their centre of diversity. Many species are rare and little known, and over 30% of plant species are endemic to Borneo.

The lowland forests are particularly rich, with most of the species being trees, but treelets, shrubs and herbs also have species with edible fruits. This guide mostly introduces the better-known species, but to showcase this diversity, some examples of rare or little-known species are also included, resulting in a total of 34 families, 55 genera, and 109 species being illustrated.

Many of the lowland forests have now been cleared for the development of agriculture, forest plantations, towns and roads, and the diversity of varieties of some species has become greatly reduced. Though some germplasm has been conserved in agricultural stations and research facilities, much more needs to be done so that those species with good commercial potential can be selected and bred as future crops for farmers. Some species have already been researched, and selected clones made available, but there are still many more with good horticultural potential.

From Natural Economy to Capitalism: The State and Economic Transformation in Perak, Malaysia c.1800-2000 / Azrai Abdullah

UTP Press, Universiti Teknologi Petronas, Malaysia 2022

388p.
Includes Index; Bibliography
9789672880219
\$ 80.00 / null
600 gm.

The history of pre-colonial, colonial and post-colonial Malaysia has witnessed the state's increasing involvement in economic affairs. Through the production and export of many sought-after commodities, mainly tin and rubber, Perak was increasingly incorporated into the world economy. The pre-capitalist system of production was slowly undermined and replaced by the capitalist system of production. Therefore, this book traces Perak's economic development path from the pre-colonial era through the colonial period till 2000. The changing mode of production, where capital accumulation increasingly took centre stage, also has other structural implications for society.

The Great Greenwashing - How Brands, Governments and Influencers are lying to you / Pabon, John

Melbourne Books, Australia 2023

288 pages, 23cm

9781922779038

\$ 39.99 / null

440 gm.

Saving the planet is big business.

Realising this, savvy companies are hopping on the sustainability bandwagon. Some may have altruistic ends in mind, but most want to make a quick buck. As ethical spending and consumer options increase, greenwashing is not only proliferating-it's also becoming harder to discern.

But how is someone at the supermarket supposed to decipher all this?

In The Great Greenwashing, John Pabon pulls no punches in arming consumers and business professionals with the tools they need to educate themselves, filter out the BS from the truth, and make a positive impact.

What birdo is that? : a field guide to bird-people / Libby Robin

Melbourne University Press, Australia 2023

264 pages ; 24 cm.

9780522879346

\$ 44.99 / null

375 gm.

The idea that a bird is good news and needs all our support is probably the only thing amateur birdos, professional zoologists and 'birdscapers'-people who redesign their gardens to support birdlife-have in common. But together they form a conservation community that cares about the future of birds and their habitats, who are working to heal the damage wrought by those who don't notice birds. What Birdo is That? reveals how bird-people in Australia have gone about their craft across the years. Its stories come from wild places - at sea as well as on the land-from dusty archives, from restoration projects, gardens and urban wastelands. They are human stories, but the birds themselves interject and interrupt any self-important anthropocentrism. They educate. They counter the imperialism of the ever-expanding economies of the new millennium. They turn up in unexpected places, giving surprise and joy. This field guide to Australia's bird-people provides a basis for understanding the complex relationship between people and birds in a land of extremes at the forefront of changing climate and habitats.

Couronnes végétales de Tahiti - Te hei upo'o no Tahiti / Tiarenui Ebb

Au Vent Des Iles, Tahiti 2023

192p. ; 26cm.

9782367345109

\$ 80.00 / null

600 gm.

En Polynésie, les parures florales font partie intégrante des arts décoratifs et de l'ornementation corporelle. Avec cet ouvrage, nous plongeons dans le monde des couronnes de tête : comment les faire soi-même, comment les porter ? Mais aussi de quelles traditions sont-elles l'héritage, comment ont-elles survécu et évolué après la colonisation européenne ? A la fois pratique et documentaire, ce livre est riche de culture polynésienne et de tutoriels clairs et pédagogiques.

Ludique, il est largement illustré de documents anciens et d'images caractéristiques de la Polynésie d'aujourd'hui.
